Adding Dense Layers

A dense layer is a deeply connected neural network layer. It is the mostcommonand frequently used layer.

```
# Adding a fully connected layer
classifier.add(Dense(units=128, activation='relu'))
classifier.add(Dense(units=5, activation='softmax')) # softmax for more than 2
```

The number of neurons in the Dense layer is the same as the number of classes inthe training set. The neurons in the last Dense layer, use softmaxactivation to convert their outputs into respective probabilities.

Understanding the model is a very important phase to properly using it fortrainingand prediction purposes. Keras provides a simple method, a summary to get the full information about the model and its layers.

```
classifier.summary()#summary of our model
```

```
Model: "sequential"
